Partner with Love

Valcom is a mission partner with **The "I Love You Guys" Foundation**, two organizations that bring strong mission alignment to ensure the safety and security of students and staff across the nation.

Maximize your resources and empower your organization to streamline emergency notifications. V-Alert deploys with one-click simplicity.

Faster more **reliable** digital path than text messaging and email.

Unlimited use and message capability allows you to send up to 1000-character count notifications, so you are sending one cohesive message as often as you want with no fees.

Remotely access files in various formats including PDFs, JPGs, word documents and others for evacuation procedures and emergency plans.

Easy to install, V-Alert is available in both Apple App Store® and the Google Play Store® and easily installs onto the users iOS or Android devices.

Unlimited channels and various user types for predefined groups and individual of users.

GE⦿ FENCING

Quickly identify and set a virtual perimeter that alerts individuals within an area.

V-Alert gives you the ability to notify in a geo-fenced location that can be combined with channel locations to target a specific area.

Activate and receive

With the capability to both receive alerts, based on the type of emergency and activate alerting protocols across your organization, V-Alert can be a pivotal piece of your Emergency Communication System. Empowering the people in your care with the tools they need to ensure the best possible outcome during an emergency.
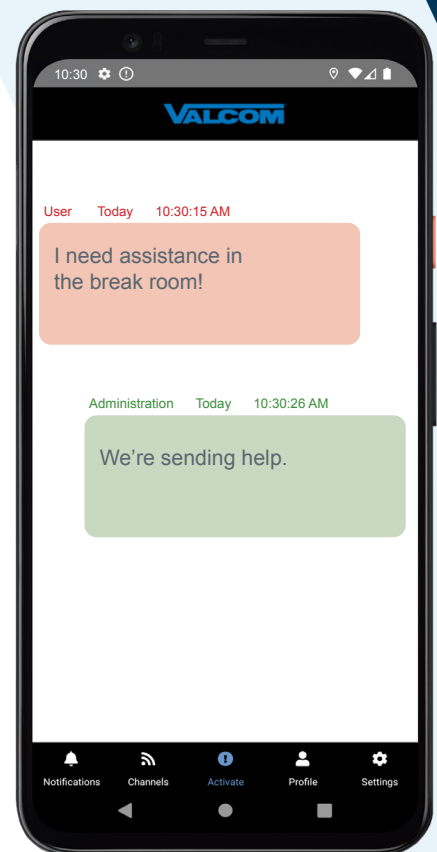

Integrate with others

The API (Application Programming Interface) allows V-Alert to interact with other emergency alerting systems, giving you extended capability of reaching your audience via a mobile device.

Chat

Enables seamless text communication between your mobile audience and administrators.

User Chat

V-Alert®

V-Alert can improve the efficiency and effectiveness of your emergency communication strategy, ensuring that critical information reaches the right people at the right time during emergencies.

Unlimited Feature Package — Offering unrestricted access to all available features and capabilities of the V-Alert mobile alerting application.

Channel Alerting — These alerts can be used to inform users about important events or updates. Organizations use channel alerting systems to ensure timely communication and response to critical information.

Optional Features

**Geofencing —** Allows the ability to target specific phones in predefined areas.

File Manager — Help users quickly and easily access specific files such as floor plans, emergency action plans, and scenario-specific protocols.

Alert Activation — Works with Valcom's notification solutions to activate a scenario directly from the user's phone. Examples of these scenarios can include lockdown, evacuation, shelter in place and other critical information.

API Integration — allows mobile notifications from Valcom Software Solutions such as VEMASS and IP6000 SiteManager®. V-Alert also integrates with other 3rd party emergency notification platforms providing one seamless notification solution.

Panic — V-Alert Panic Button feature enables you to initiate an alert from your mobile device while populating a preset telephone number allowing direct communication with emergency personnel.

Chat — Enables seamless text communication between your mobile audience and administrators.
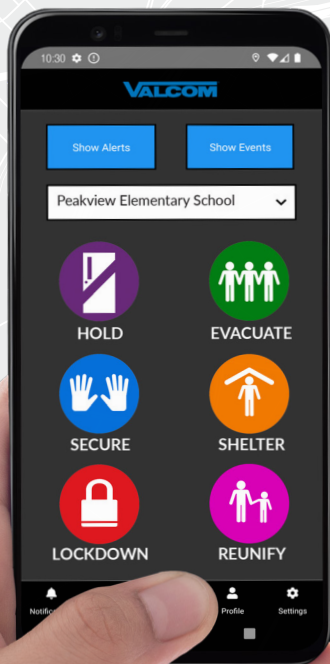

If you have specific questions or need more detailed information about any of these features enhancing the speed and reliability of communication within your enterprise, please contact us today!
